

FLEXEDGE

Intelligent Edge Automation Platform, Delivering Real Time Monitoring of Critical Applications

Our Profile

FlexEdge® Intelligent Edge Automation Platform, gives industrial organizations the complete, scalable access they need to take full advantage of all the industrial data embedded in your operations. It provides the critical features industrial companies need to bridge their current manufacturing and production systems with older equipment using legacy data protocols

- Powerful data access capabilities
- Trusted cybersecurity features
- All-in-one programming environment eliminates multiple configuration tools
- Convert up to 20 protocols simultaneously from over 300 supported drivers
- An all-in-one environment that eliminates the need for multiple configuration tools
- Connect to most MQTT cloud servers for data transfer over internet or for LAN communication via OPC UA
- Rapidly build graphic interfaces with comprehensive image library of over 5,000 industrial graphics
- Capabilities using full-featured C-type syntax programming environment to support advanced math, local variables, pass parameters, calls, return values and more
- Ability to remotely access applications through OpenVPN, IpSec and GRE tunneling protocols
- Advanced diagnostic tools useful for quicker troubleshooting with Wireshark captures, connection status, active routes etc.
- Rugged enclosure, Operating temperature range of -40° to 75°C
- Hazardous Location (HazLoc) Certifications including UL Class 1, Division 2, and ATEX/IECEX.
